from the executive editor

Dear Readers:

Welcome to the Winter 2009 edition of *Carle Selected Papers* which features several interesting articles and compelling clinical vignettes.

This issue was compiled by Dr. Robert Zeiders, who has served as the journal's executive editor for the past three years. During this time Dr. Zeiders worked tirelessly to obtain interesting, poignant and clinically applicable articles for our readers. Dr. Zeiders retired from CSP this past summer and his dedication, kindness and humor will be missed by the entire CSP staff. We thank him and wish him all the best.

In highlighting some of the articles in this issue there is a particularly good review on psoriatic arthritis by Dr. Castro-Rueda that summarizes this insidious and progressive disorder and presents current and future treatment modalities. Dr. Benjamin Davis has provided a review on early goal-directed therapy for sepsis. Based on the concept that lead to improved outcomes in myocardial infarction and stroke, early recognition and standardized treatment of sepsis may also profoundly improve outcomes. Our Clincopathological Conference article presents a fascinating case of an 18-year-old male with a rash. The presentation and discussion are well worth the read.

It is my pleasure to serve as the interim executive editor of CSP. As always, the editorial staff invites you to drop us a line if you have a topic suggestion or an interesting case you would like to present through *Carle Selected Papers*.

William Schuh, MD, PhD
